

Event Attendance API

REST API for managing events and participants

Laravel-based backend application

Token authentication and role-based authorization

OpenAPI / Swagger documentation

Postman collection for API testing

Project Overview

Manage events and their participants through a JSON REST API

Register and authenticate users with Laravel Sanctum

Create, read, update and delete events and participants

Assign participants to events and manage assignments

Validate requests and return structured API responses

Technology Stack

Backend PHP 8.4+ • Laravel

Database MySQL / MariaDB

Authentication Laravel Sanctum

API Documentation OpenAPI 3.0 • L5-Swagger • Swagger UI

Testing Postman

Version Control Git • GitHub

Database Structure

Future Development

The project provides a foundation for further system expansion. The following features can be added:

- Attendance tracking
- Late arrival tracking
- Report generation
- Search and filtering by various parameters
- Further functionality extensions according to the client's requirements

API Structure

Authentication

Register • Login • Logout

Events

CRUD • Full & partial updates

Participants

CRUD operations

Event Participants

Assign • List • Remove

Users

List • Roles • Delete

Authentication & Authorization

Guest	View events
User	View events + assigned participants
Manager	Manage events, participants and assignments
Admin	Full management + users and roles

Admin restriction: an admin cannot change their own role or delete their own account.

Documentation & Testing

Swagger UI provides interactive OpenAPI documentation

Endpoint descriptions include parameters, schemas and response codes

Sanctum Bearer authentication is documented for protected endpoints

Postman collection provides ready-to-use API requests

Environment variables allow the authentication token to be reused automatically

Result

A complete REST API for event attendance management

Clear separation of authentication, business logic and authorization

Role-based access control for Guest, User, Manager and Admin

Documented and testable API using Swagger and Postman

Source code and project documentation maintained in GitHub
